All Coverage	713,000	1,470,000	2,183,000

* Includes Medicare, CHAMPUS, & Other Public

Source: Current Population Survey (CPS), March Supplement 1996

Compiled by the UCLA Center for Health Policy Research

The Current Population Survey (CPS) data are the primary source of information on insurance status in California. The UCLA Center for Health Policy and Research analyzes these data to provide policy makers and other interested parties with timely information on insurance coverage in the state. While DHS has concerns that the CPS data underestimate the number of individuals enrolled in the Medi-Cal program, California believes the data present a useful demographic picture of the insurance status of California's children. Healthy Families will serve children ages 1 through 18 under 200 percent of poverty who are uninsured and ineligible for the Medi-Cal program. According to the above chart compiled by the UCLA Center for Health Policy Research at DHS' request, an estimated 580,000 children in this age and income bracket are uninsured and are thus potentially eligible to be served by Healthy Families.
